## Education

### Cornell University

Ithaca, NY

B.A. in Computer Science, Conc. in Programming Languages & B.A. in Philosophy, Conc. in Logic

August 2021 - May 2025

## Experience

### NASA, Langley Formal Methods

Langley Research Center, VA

Research Assistant, Program Verification, Advised by Dr. Alwyn Goodloe

Present

- Developing Coq proofs for statically proving properties of a DTN protocol to ensure end-to-end data delivery.

### Carnegie Mellon University, S3D

Pittsburgh, PA

Research Assistant, PL/Program Verification, Advised by Dr. Jonathan Aldrich & Dr. Jenna DiVincenzo

May 2022 - Present

- Core contributor on the early development of the Gradual Verification framework.
  - *Verification*: Implemented a Property Based Testing tool for evaluating soundness of Gradual  $C_0$  and developed formal proofs for establishing semantic correspondence between static and dynamic verification.
  - *Performance*: Significantly optimized benchmark results by using second-order logic equivalences for runtime assertions.
- Exploring the application of Gradual Verification to smart contracts on the *Algorand* and *Ethereum* blockchain platforms. Developed a prototype for Gradually Verified Teal and Gradually Verified Ethereum.

### Cornell University, CIS

Ithaca, NY

Teaching Assistant, CS 4/5110 Programming Languages and Logics, Taught by Dr. Adrian Sampson

January 2024 - May 2024

- Examination czar in charge of the infrastructure of midterms, graded students' assignments, and held weekly office hours.

Research Assistant, Programming Languages, Advised by Dr. Adrian Sampson

October 2021 - December 2022

- Implemented *Graphicionado Graph Analytics* algorithm in Calyx as a case study of the language. Found/solved soundness bugs in the front-end in the Computer Architecture & Programming Abstractions group.
- Worked on a symbolic execution tool for verifying parallelism in Calyx.

## Projects

- **Optimization of a Concurrent PL Model Checker.** (*Cornell CS 6120 Advanced Compilers*) Reduction of state explosion for the Harmony Concurrent Programming Language's model checker.
- **Incremental Specification Mining** (*Cornell CS 6156 Runtime Verification*) Instrumentation for Maven-based projects that *incrementally* mines specifications for runtime verification. Significantly decreases overhead for evolutionary-aware specification miners. Supports integration with Javert and BDDMiner. [Repo]
- **RNAFoldml** (*Cornell CS 3110 Functional Programming*) OCaml package that enables users to input both RNA sequences in FASTA format and a set of constraints to predict RNA secondary structure. [Repo]
